

TaskFlow API — API Specification

API version: v1

1. Authentication

The API uses an API key supplied in the X-API-Key request header. Requests without a valid API key are rejected.

2. Create Task

Endpoint: POST /api/v1/tasks. Required fields: title and project_id. Optional field: due_date.

3. Get Task

Endpoint: GET /api/v1/tasks/{task_id}. The response contains task_id, title, project_id, status, and due_date.

4. Update Task

Endpoint: PATCH /api/v1/tasks/{task_id}. Supported update fields are title, status, and due_date.

5. Error Responses

Status	Meaning
400	Invalid request
401	Invalid or missing API key
404	Task not found
